

US-3.3 — Provide location-aware nearest shuttle stop

Personas: Emily Nguyen (new student), Liam Dubois (young staff), Sofia Lopez (graduate student), Alexia Martin (student with mobility disability), Jordan Lee (staff with colorblindness)

- Given location permission is granted and location services are enabled, when the user requests the nearest shuttle stop, then the app identifies the nearest shuttle stop and shows it to the user.
- The app displays the approximate distance to the nearest stop.
- If the user is already at (or very near) a shuttle stop, the app indicates that clearly.

Accessibility: nearest stop name and distance are readable by screen readers.

If location permission is denied or location is unavailable, the app shows a clear message and does not crash.
