

US-2.1 — Select start and destination by tapping buildings on the map

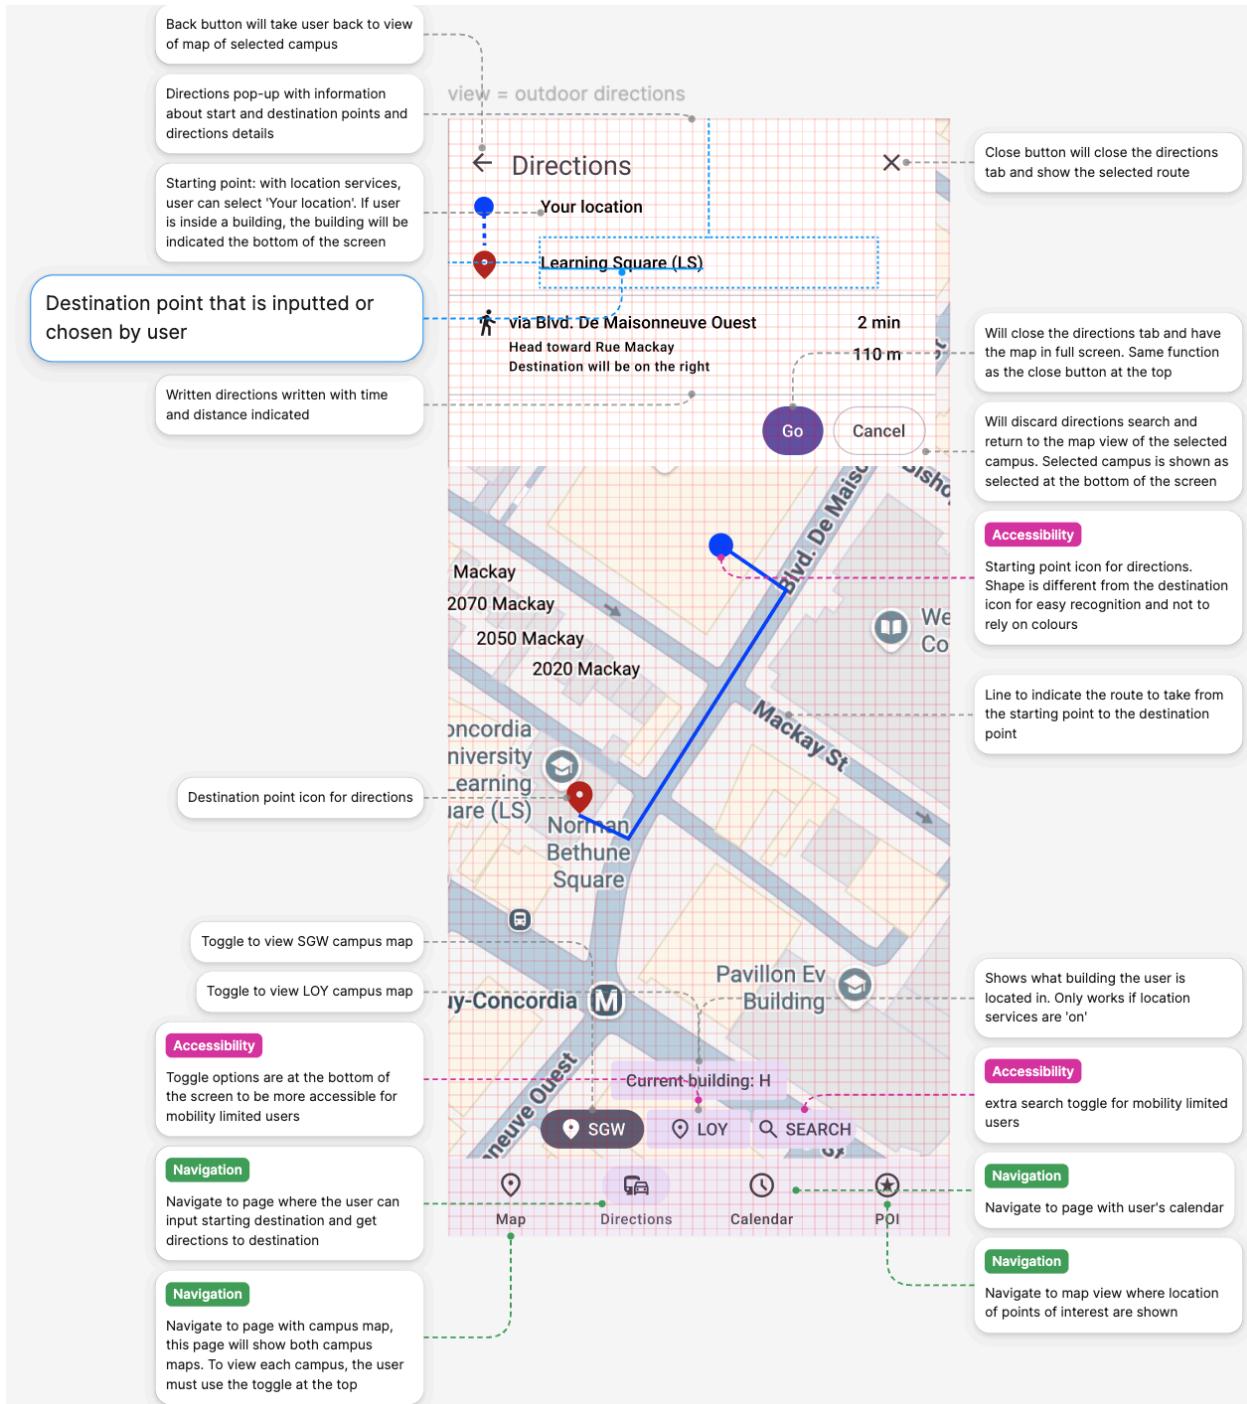

Personas: Sarah Chen (regular student), Alex Thompson (new student/visitor), Jordan Martinez (student with disability), Yuki Tanaka (international student), Dr. Robert Kim (faculty/staff)

Given the campus map is displayed with building polygons, when the user taps a building, then the app can set it as a start or destination (via a clear UI flow such as “Set as Start” / “Set as Destination”).

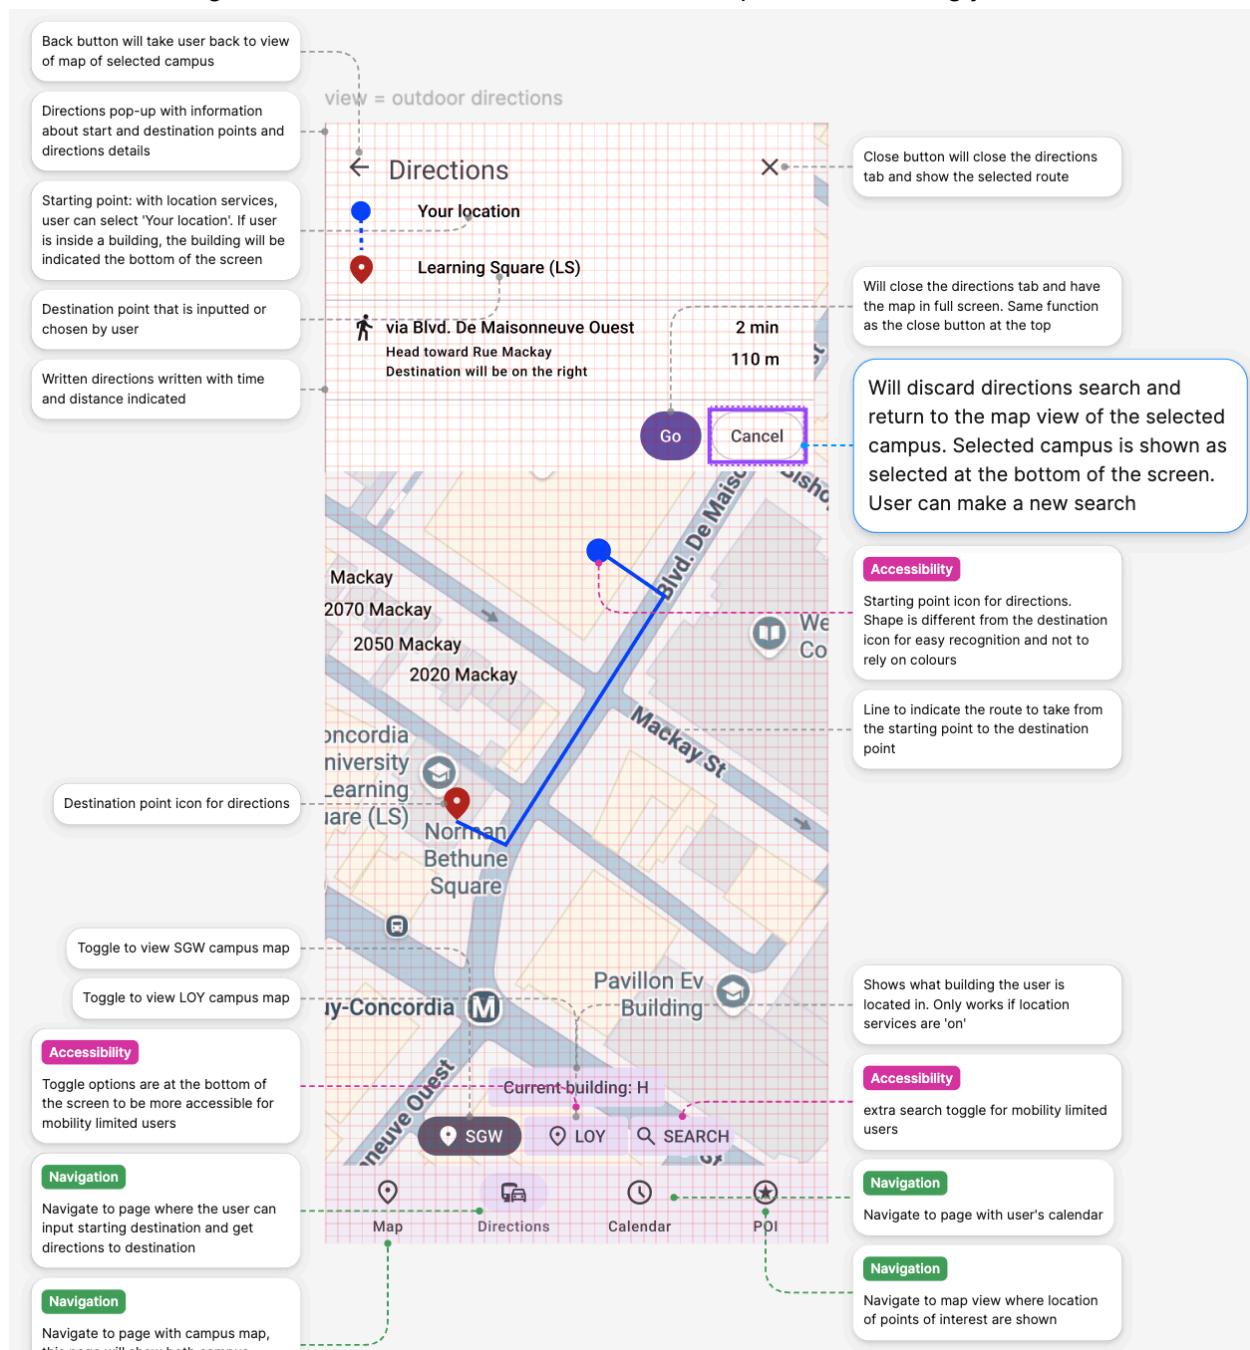

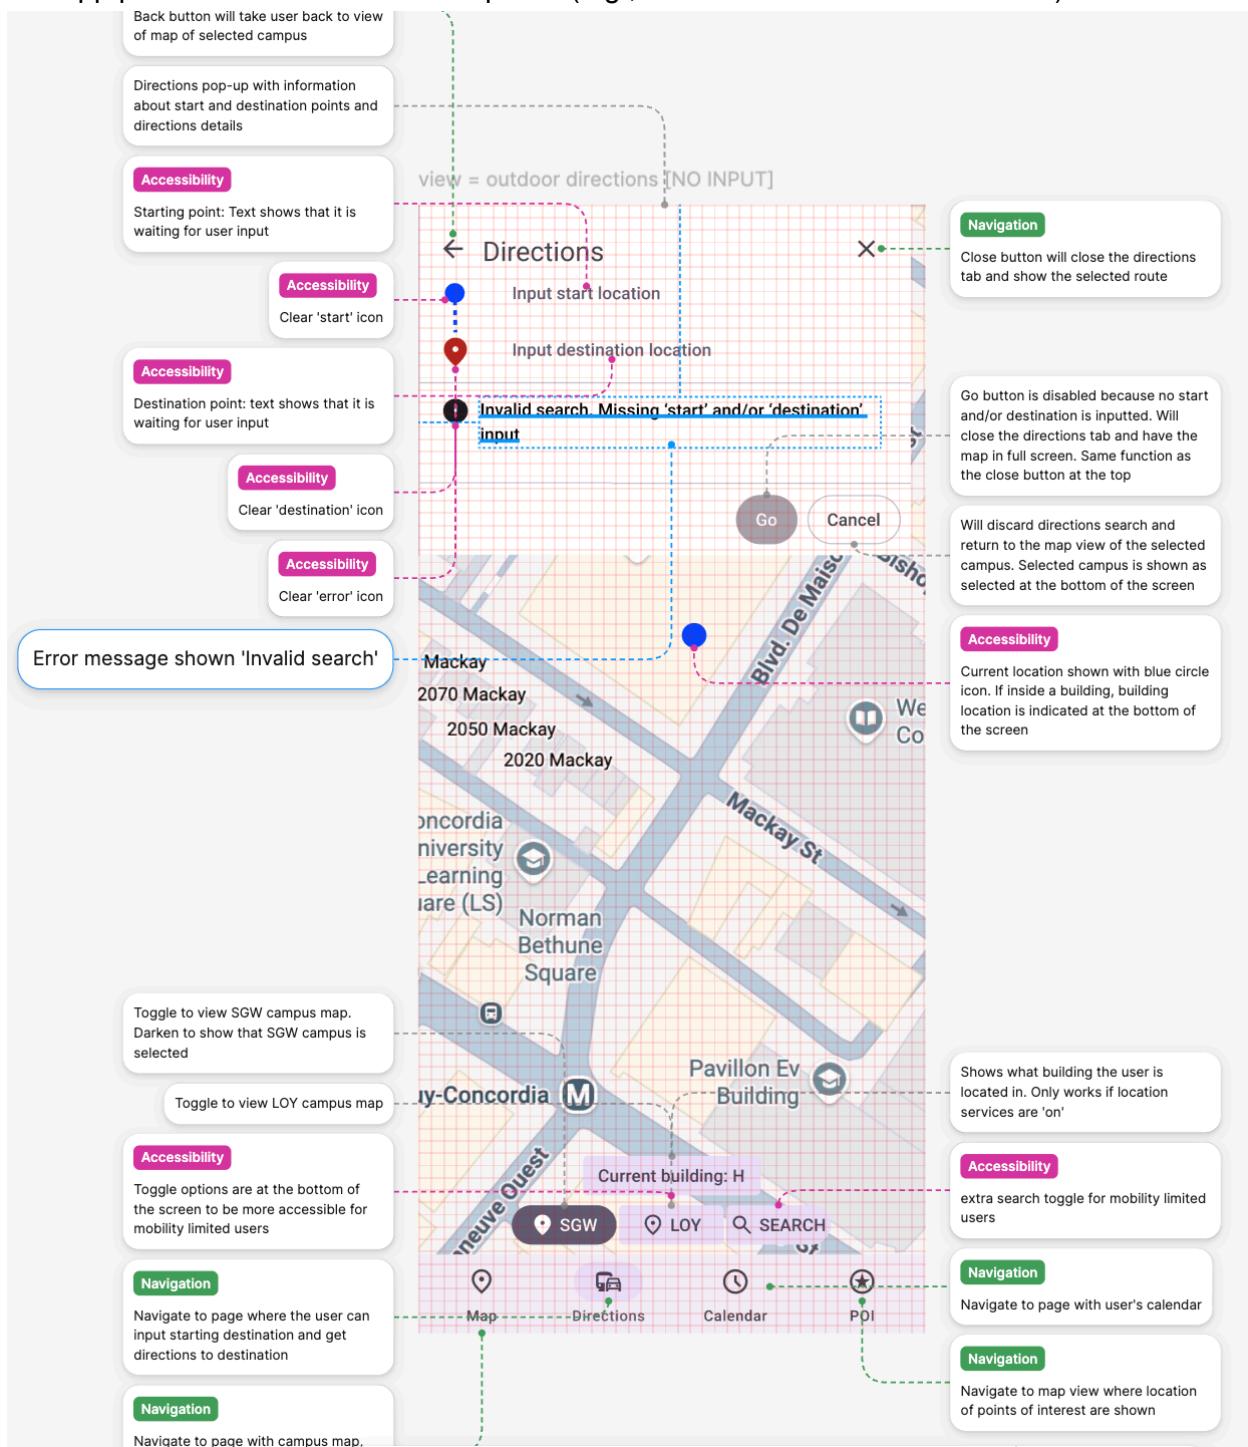

The currently selected start and destination are visible on the screen (e.g., labels, chips, or input fields).

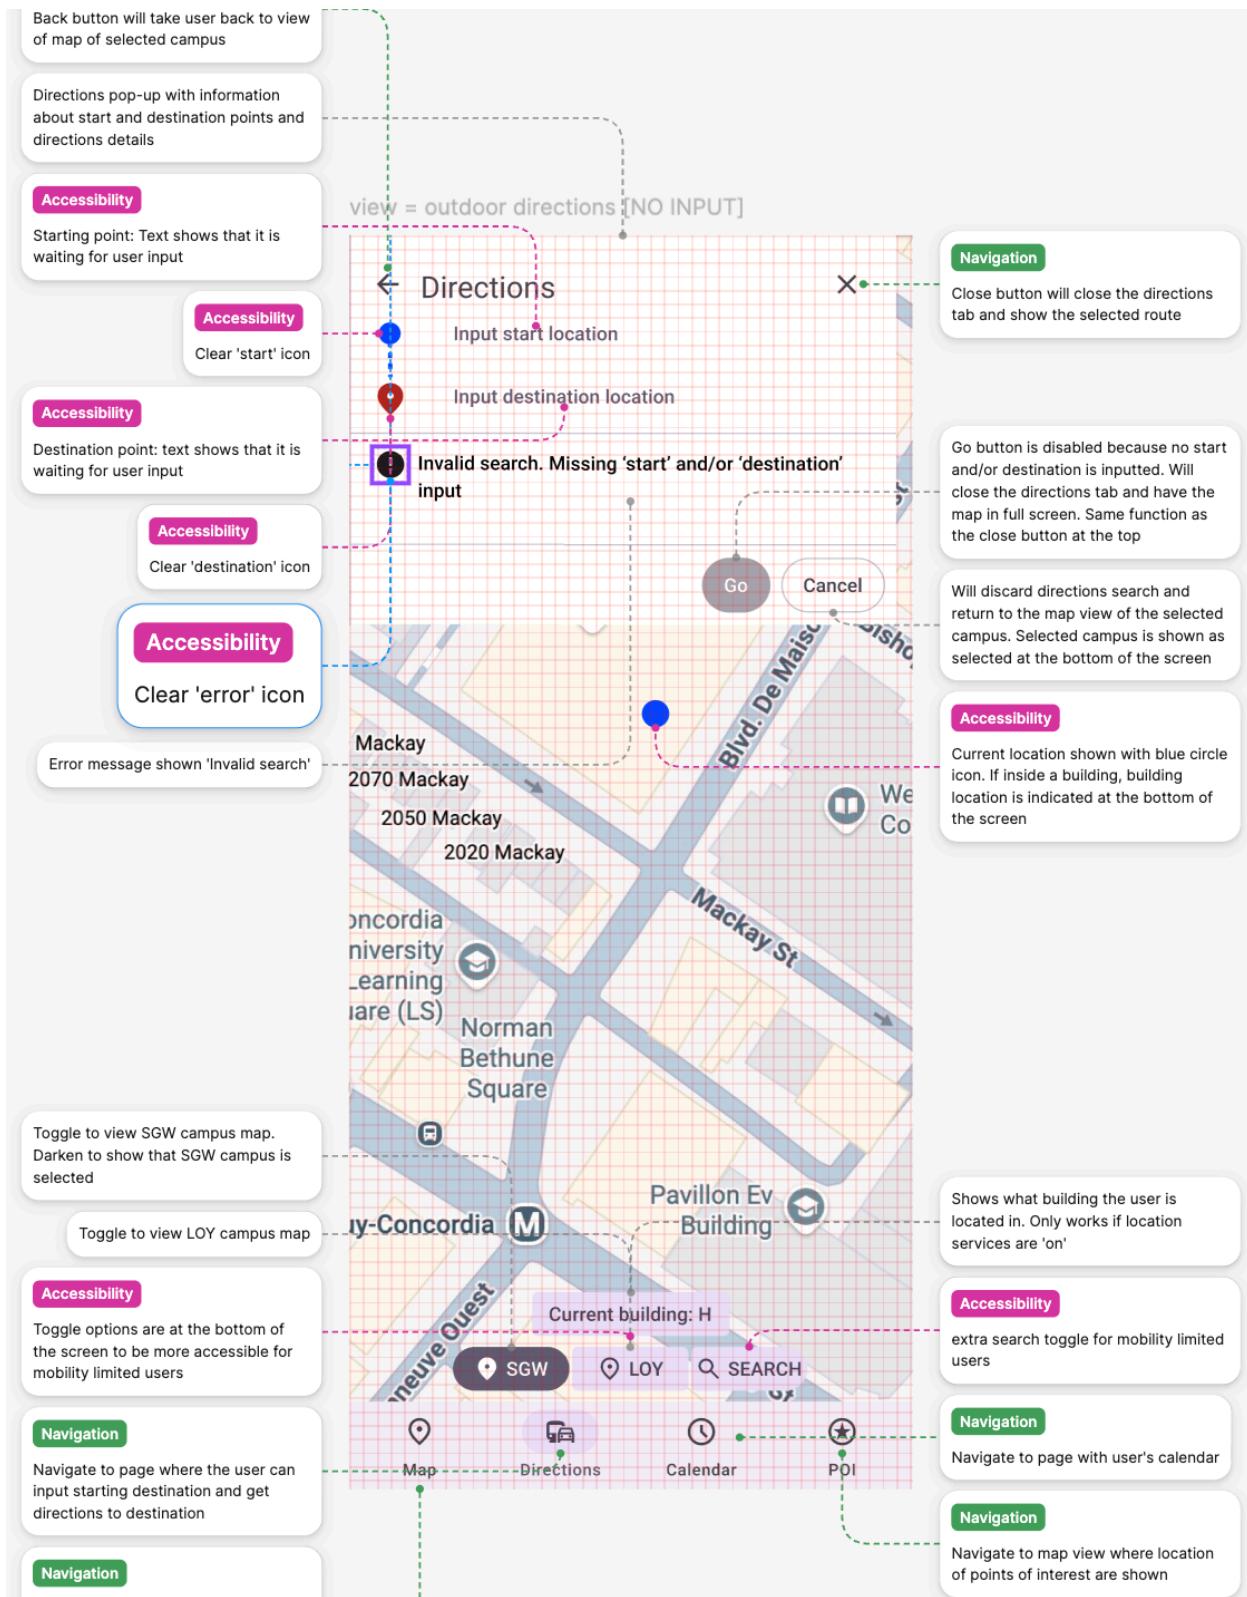

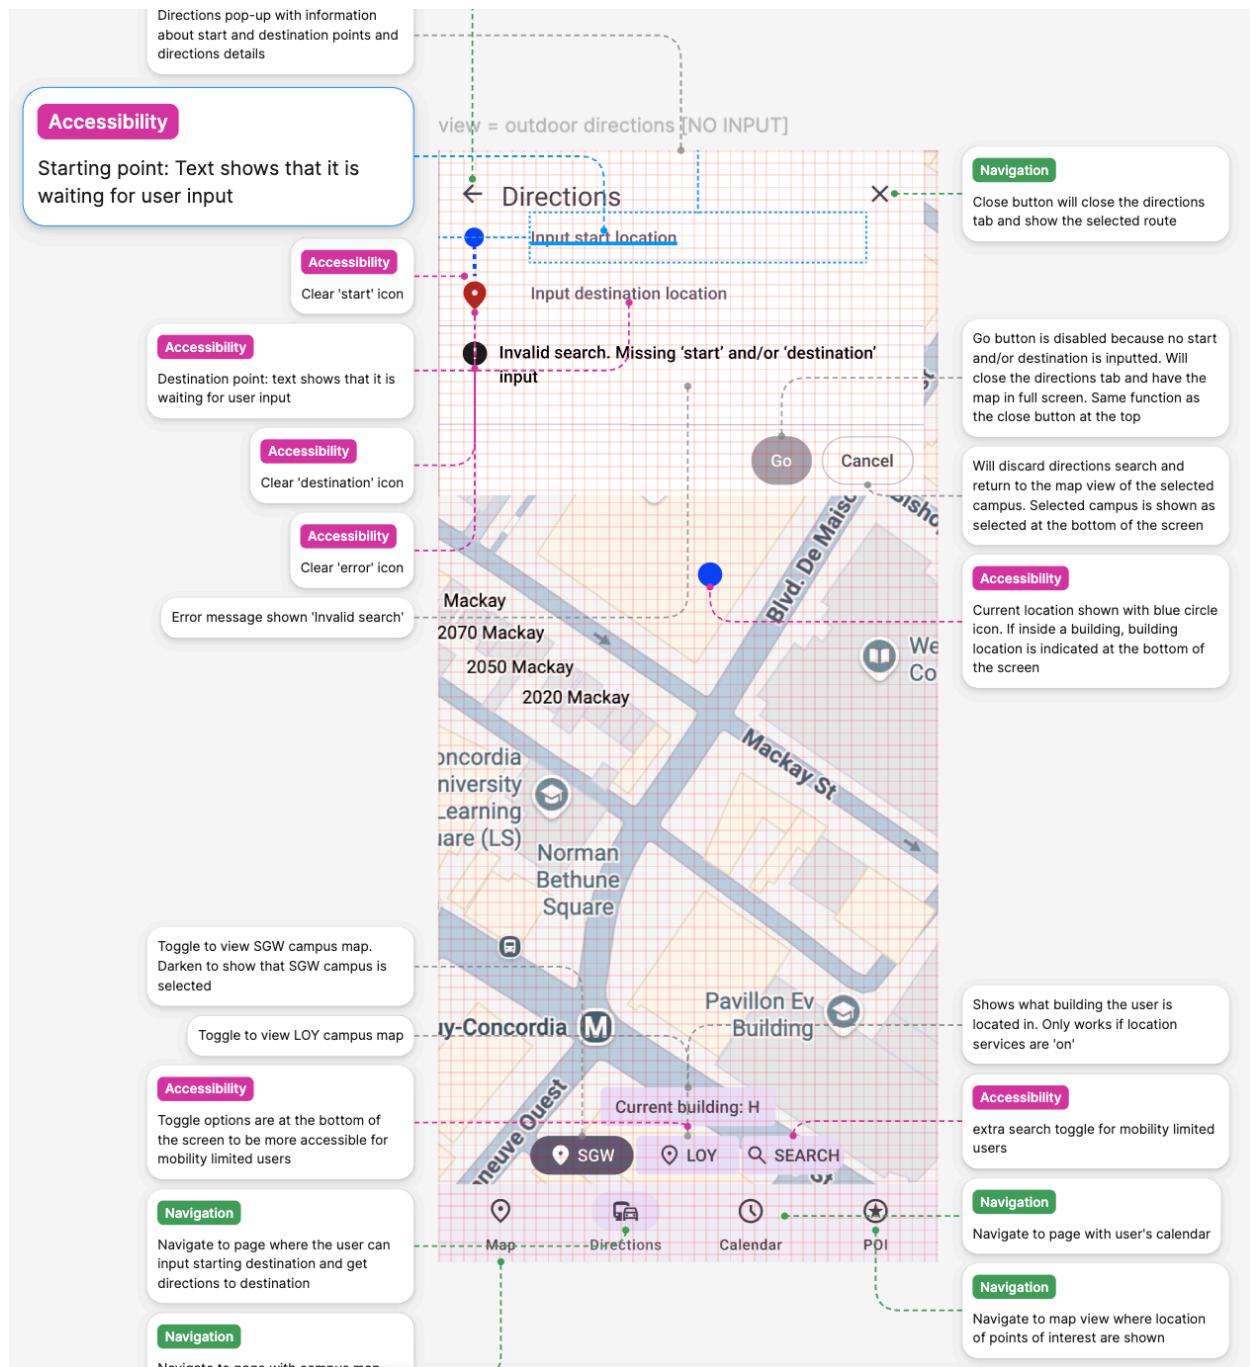

If the user changes their selection, the start/destination updates accordingly.

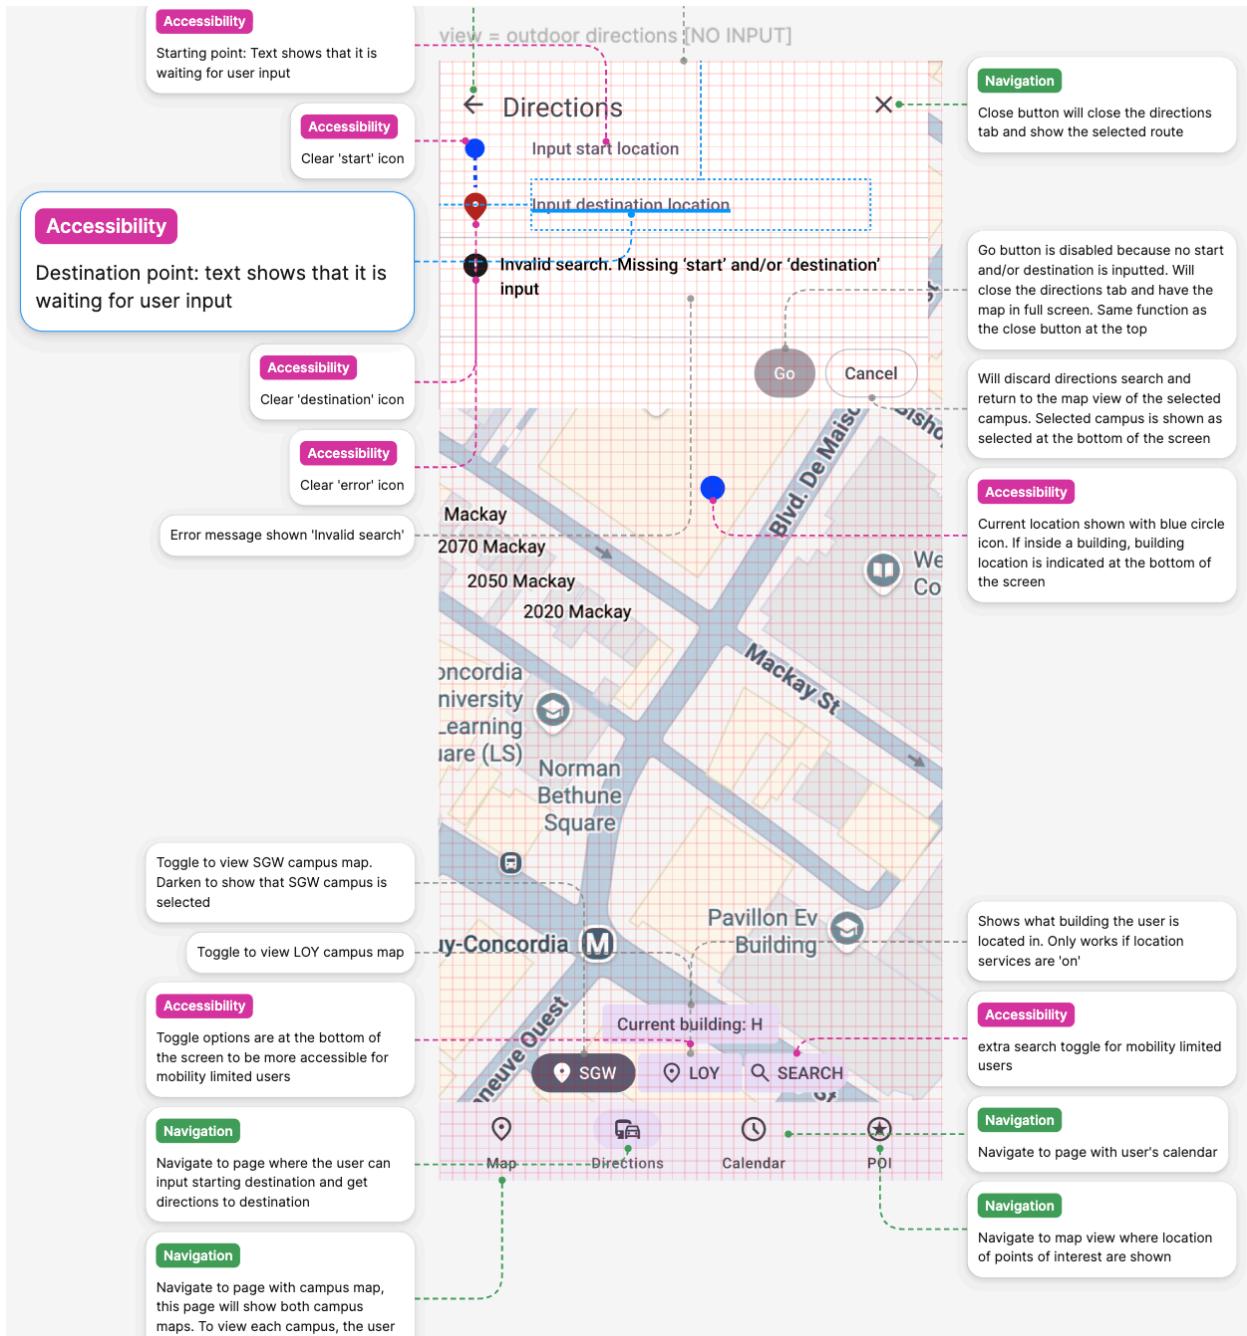

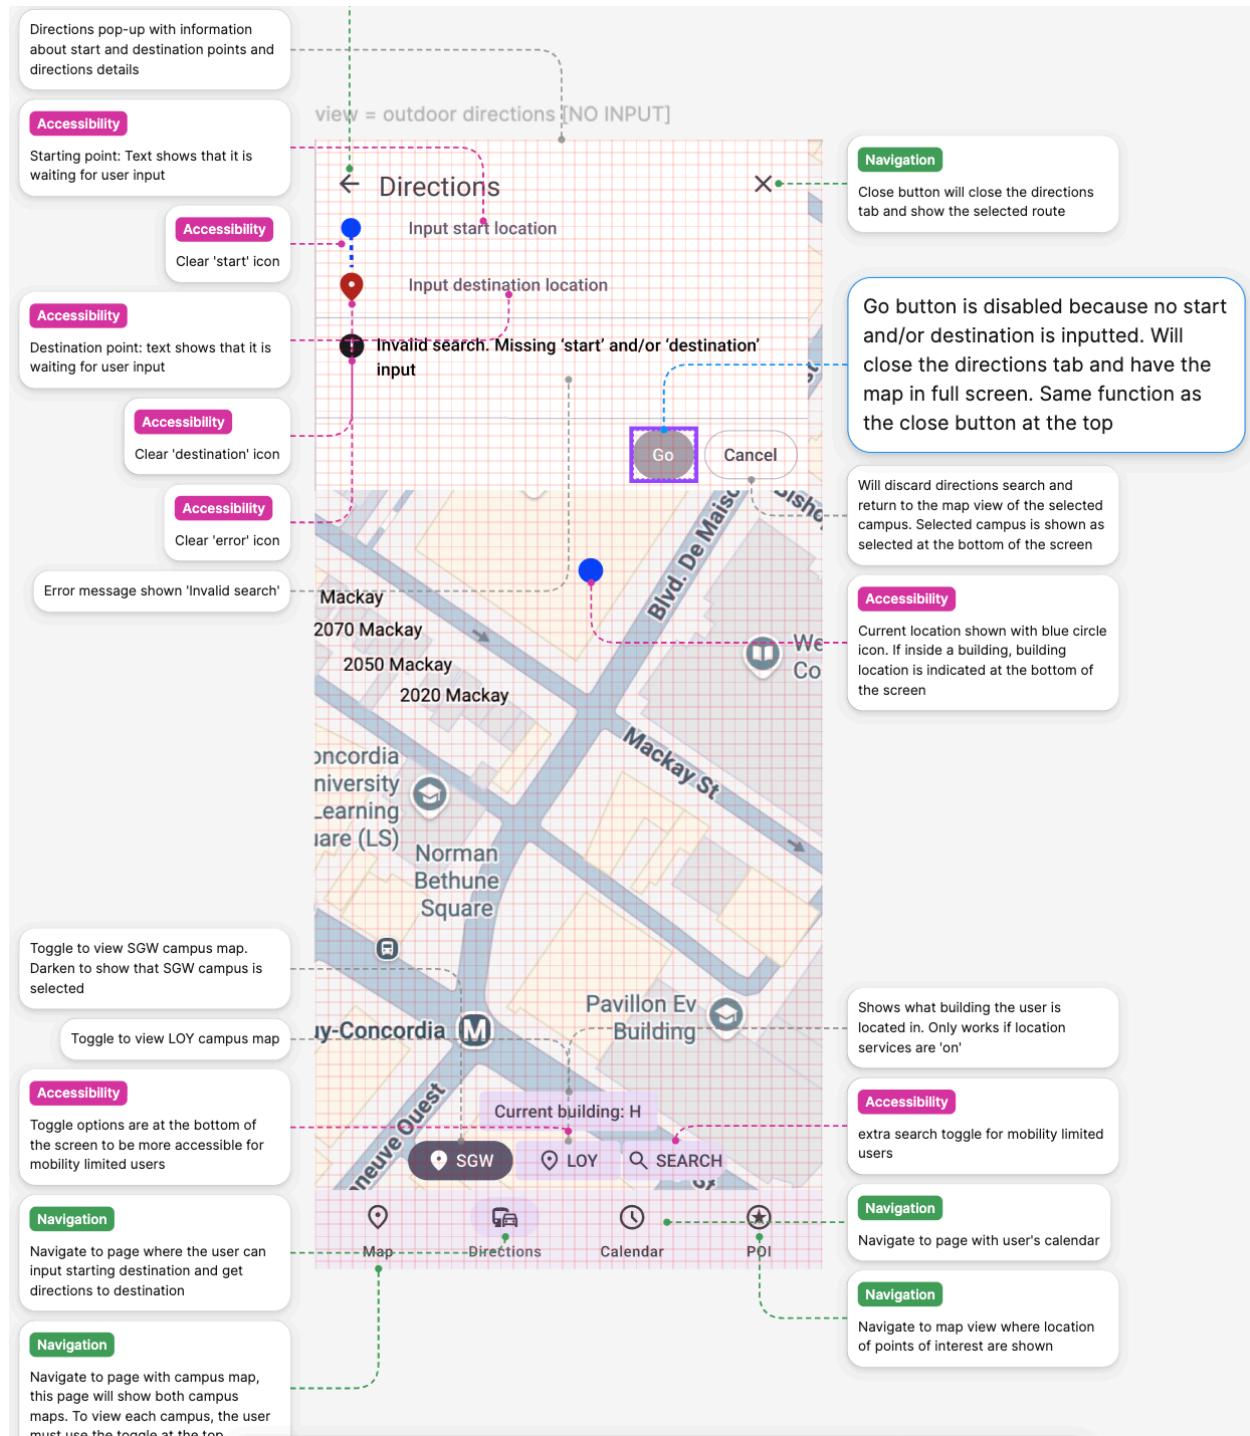

The app prevents invalid direction requests (e.g., both start and destination unset).

Accessibility: all selection actions are operable via screen reader (buttons have labels and roles).

Labeled in pink 'accessibility'
