

Concordia Campus Guide

Sprint 4 retrospective

What did we do:

- Completed all the user stories that got pushed. Completed halfway sprint 4 US.
- Worked on usability testing research
- Emphasized PR reviews and comments about design patterns and refactoring
- Continued to improve code structure and functionality

What went well:

- We had a better understanding about how the app works in terms of implementing the features

What did not work well:

- Time is still an issue, there hasn't been enough time to complete future features
- Delays in earlier user stories, which slowed down integration

What do we need to improve on:

- Delegation of tasks
- Communication and responsiveness
- More balanced task repartition

General notes:

- Windows updates have been causing issues
- We had problems with the emulator as it kept crashing, which also slowed down development.
