

US-4B.3 - Retrieve schedules and classroom locations for tracked courses

Accessibility: schedule summary is readable by screen reader.

- Given the user has configured at least one course, when the app fetches schedules, then it retrieves meeting times and location information (building/room when available) for each course.
- The app displays a schedule summary (at minimum: course name, day/time, and location when available).
- If a course has missing/unknown location data, the app clearly indicates that.

UPDATE after PO meeting:

- Text on cards are difficult to read
- Suggest: increasing contrast of text or making the colour of cards less pigmented to increase text readability

*Applicable to all cards in this style
