

US-5.7 - Support indoor-to-indoor navigation across campuses (SGW <-> Loyola)
Given Start is an indoor room on SGW and Destination is an indoor room on Loyola (or vice versa), when the user requests directions, then the app produces a multi-leg plan:

select classroom

Hall Building Select floor Select classroom JD

Building

John Molson School of Business

Select floor

1

Select start destination point

1.210

If end destination is in a different building, please select destination building

Central Building

Select end destination point

104

View indoor map

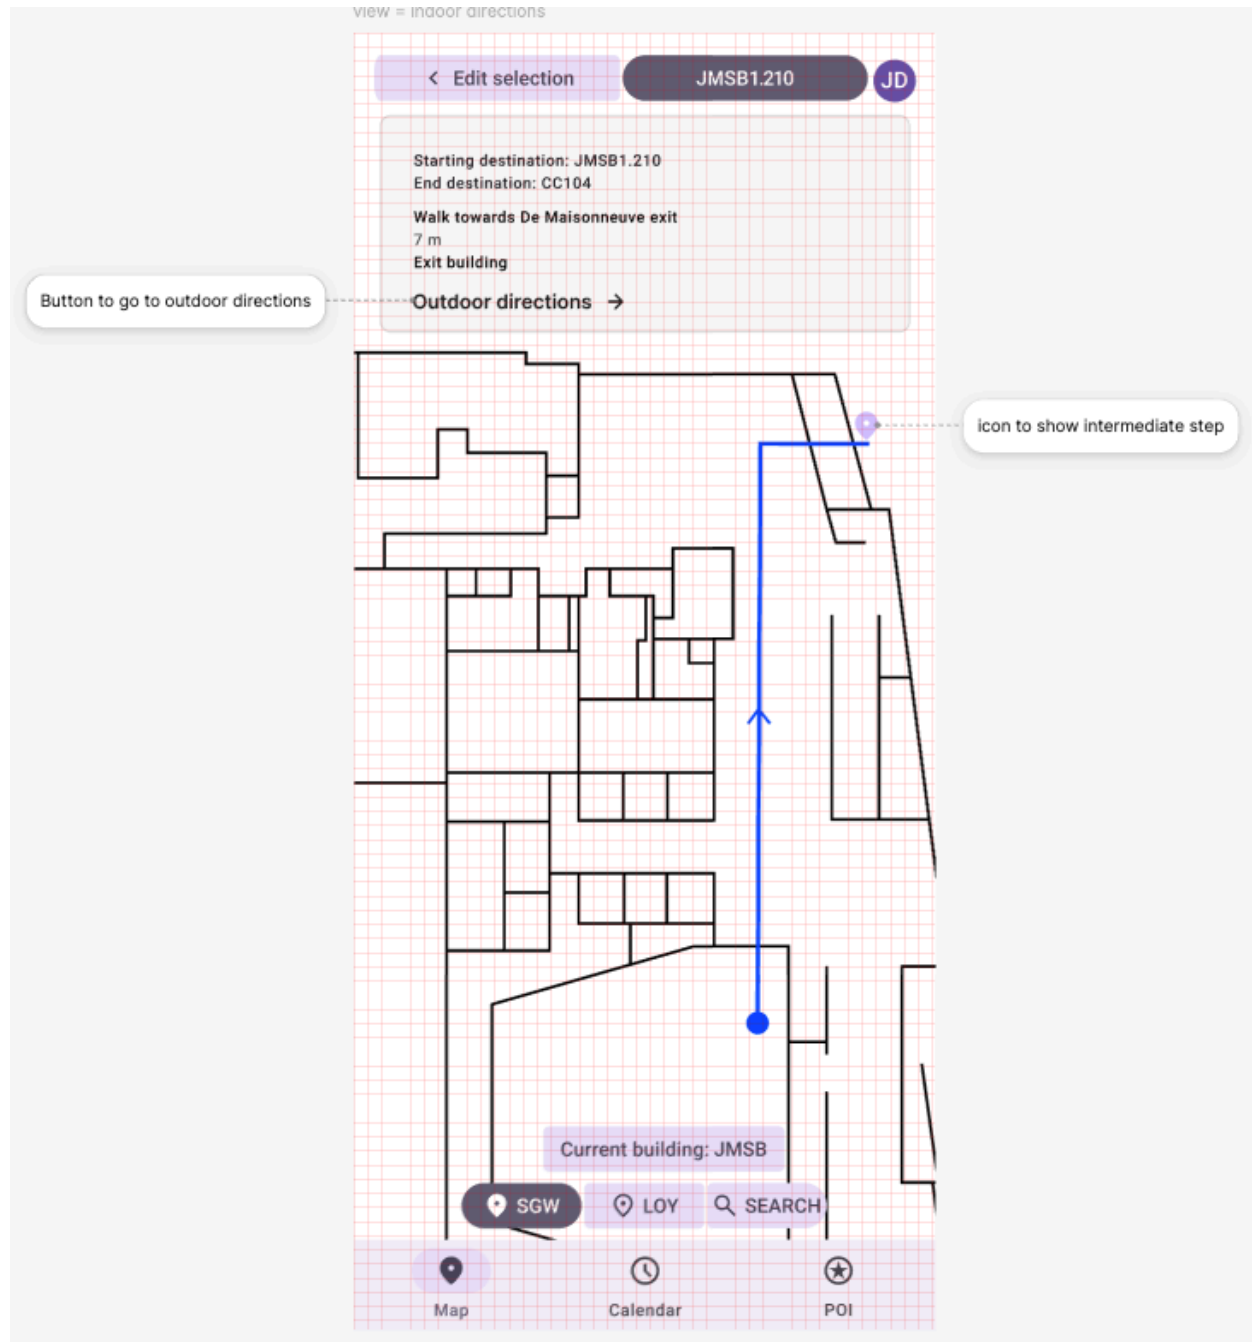

Change of building and campus

Current building: H

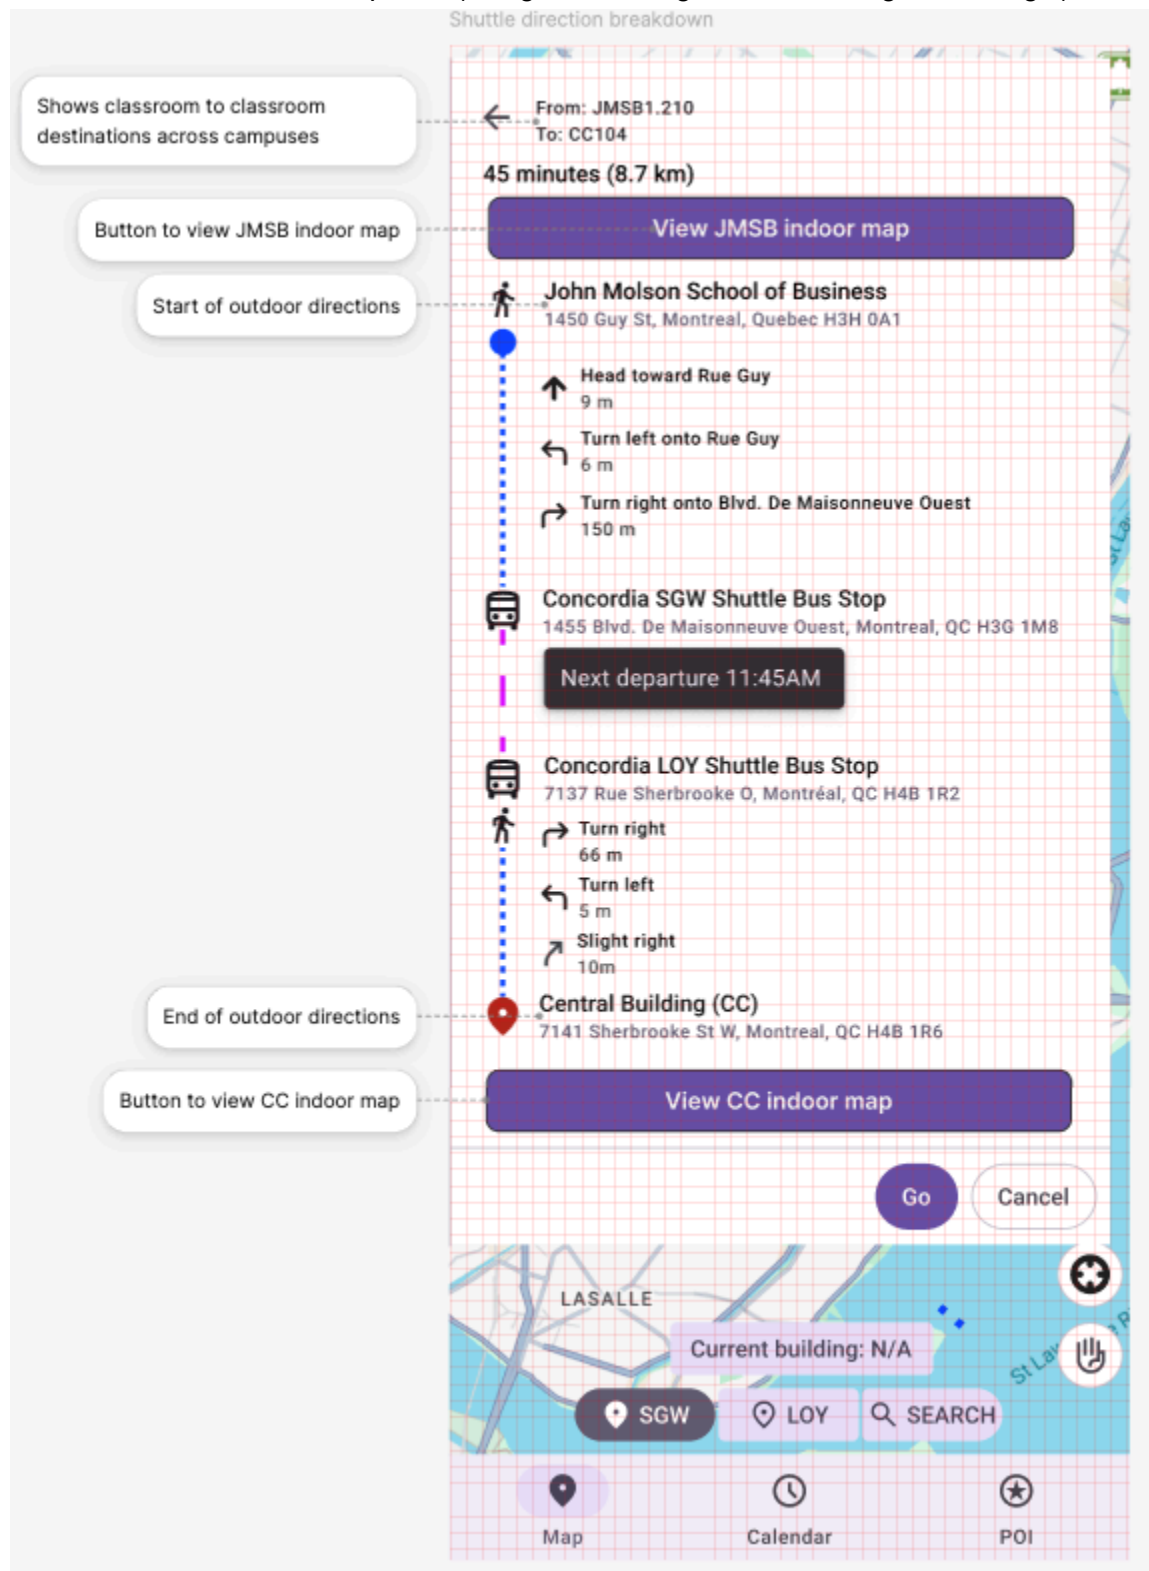

SGW LOY SEARCH

Map Calendar POI

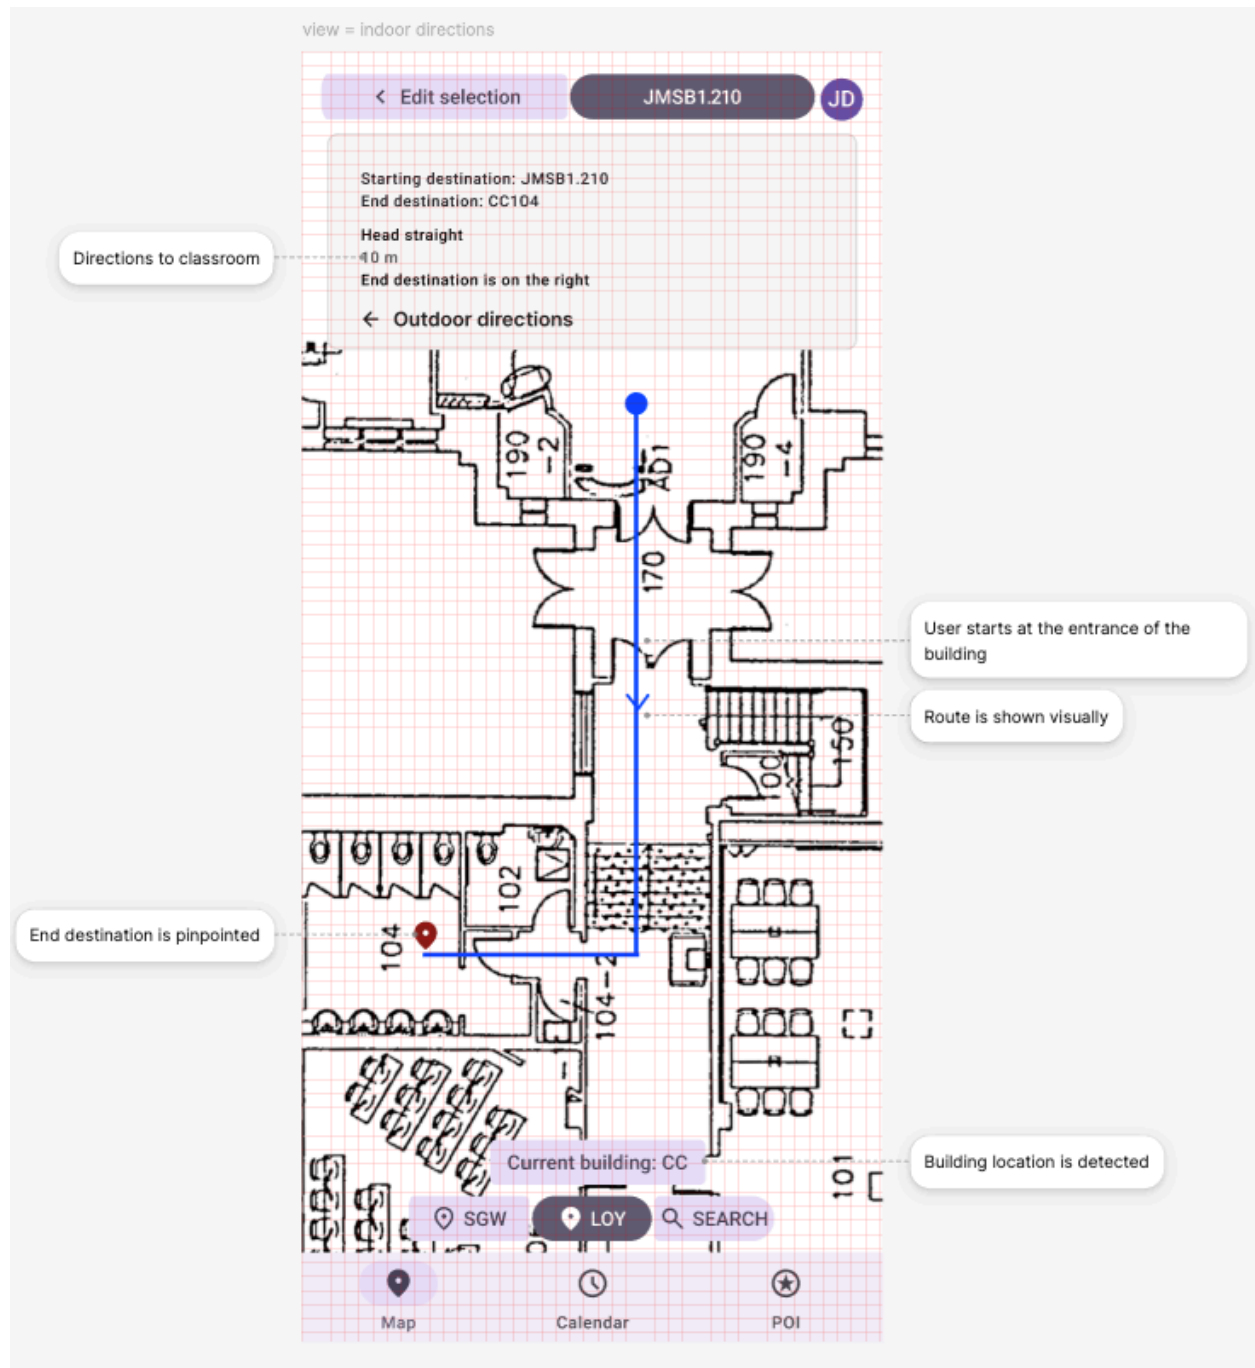

Indoor route from Start room to an exit/entrance point of the building

Outdoor route between campuses (using the existing outdoor routing/shuttle logic),

Indoor route from the arrival building entrance to the Destination room.

If any required leg is not available (missing indoor map, outdoor route failure), the app clearly indicates which part failed and provides a fallback (for example: route only to destination building).

The screenshot displays a mobile application interface for route planning. At the top, there are three buttons: "Hall Building", "Select floor", and "Select classroom", followed by a user profile icon labeled "JD". Below these is a progress bar. The main form contains several dropdown menus: "Building" (set to "John Molson School of Business"), "Select floor" (set to "1"), "Select start destination point" (set to "1.210"), and "Select end destination point" (set to "202"). A text prompt reads: "If end destination is in a different building, please select destination building". Below this, the "Central Building" is selected in the "Select end destination point" dropdown. An error message is displayed in red text: "Error Missing indoor route to end destination point. Directions will only show route to destination building." Below the error message is a button labeled "View indoor map". At the bottom, there is a status bar showing "Current building: H" and three buttons: "SGW", "LOY", and "SEARCH". The bottom navigation bar includes icons for "Map", "Calendar", and "POI".

Change of building and campus

End destination point could not render a leg of the route. Error message clearly indicates which part failed and what will be provided

Text message to clearly explain error and what will be offered

User can still go on but is made aware of fallbacks
