

US-4B.5 - Resolve classroom/building location to a campus destination

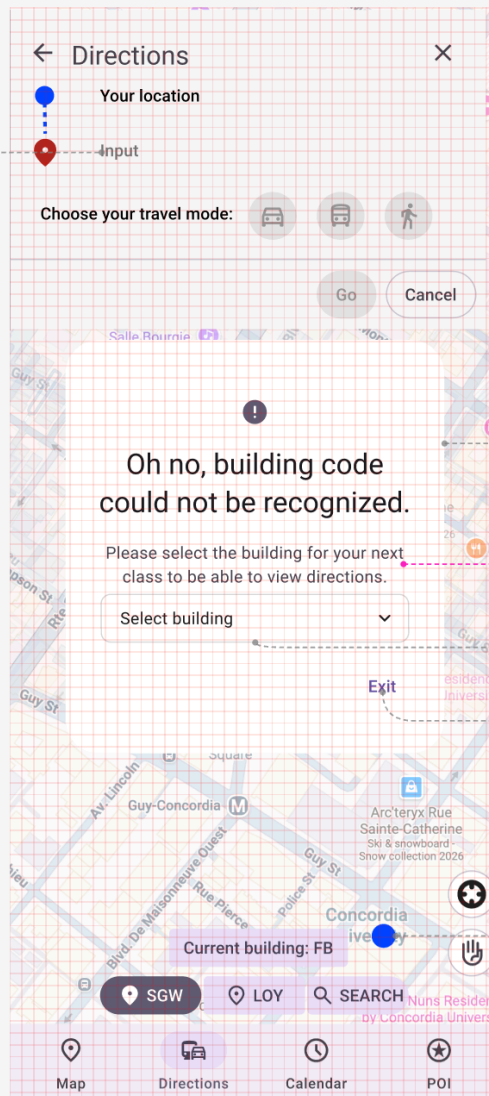

- Given the next class includes a building code (and optional room), when the building exists in the app's building dataset, then the app resolves it to the correct campus building.

- If the building code is not recognized, the app shows a clear message and allows the user to manually choose a destination building.

[UPDATE]directions to shuttle

User can see that the directions did not successfully find the destination building

Error pop up if building code could not be recognized. App will not crash and ask user for manual input to map to destination

Accessibility

Text support

User can manually select building

Exit button will lead users back map view

User can see their location. If user is in a campus building, the ui will clearly note the building (in this case: FG)
