

US-4B.1 - Connect to Concordia Open Data API

- Given the app is opened, when the user enables “Use Open Data schedule”, then the app can successfully call the Open Data API endpoints required for schedules.
- If the API is unreachable (network error) or returns an error response, the app shows a clear message and does not crash.

UPDATE after PO meeting:

- Make error message more general as it's difficult to pinpoint where the error might come from
- Suggestion 'App not responding' 'Please try again soon'
